SUMMARY

Software Engineer specializing in high-performance systems and backend development. Experienced in optimizing real-time simulations (20x FPS boost) and contributing to massive-scale open-source projects (16M+ users). Skilled in Spring Boot, Unity, and Android with a strong focus on clean architecture.

PROFESSIONAL EXPERIENCE

Software Engineer Intern | [Cythero](#)

Jul 2023 - Oct 2024

- Independently built a [VR Sandblasting training simulator](#) used for student and employee training.
- Co-developed a [Dental training simulator](#) used for student training.
- Improved real-time simulation performance by ~20x FPS through optimized approaches.
- Designed and implemented core systems with focus on efficiency and maintainability.
- Prototyped high-performance VR features as part of R&D work.

PROJECTS & OPEN SOURCE

[Mihon](#) | Open-Source Android App (16M+ Downloads)

- Implemented customizable swipe gesture actions
- Added navigation and UX improvements
- Collaborated with global maintainers to meet Material Design standards

Bug-Tracker (Full-Stack) | Personal Project | [Backend](#) | [Frontend](#)

- Built a monolithic backend using Spring Boot
- Implemented OAuth2, JWT, and RBAC
- Containerized the application using Docker Compose

[Portfolio Website](#)

- Built with React and TypeScript
- Includes project demos and videos
